Effects of Overexposure: Disulfoton is a toxic chemical, which inhibits the enzyme cholinesterase.

Uncontrolled exposure to Disulfoton(the raw material) can produce symptoms such as nausea, sweating, a sense of tightness in the chest and constricted pupils. Increasing exposure can produce more serious symptoms such as stomach pains, vomiting and diarrhea, while grossly excessive exposure can produce more serious symptoms of life threatening effects, such as muscular tremors, uncontrolled mucous secretion, convulsions and coma.

NOTE TO PHYSICIANS: **Antidote:** Administer atropine sulfate in large therapeutic doses. Repeat as necessary to the point of tolerance. 2-PAM is also antidotal and may be administered in conjunction with atropine.

The compound inhibits cholinesterase resulting in stimulation of the central nervous system, the parasympathetic nervous system, and the somatic motor nerves. Do not give morphine. Watch for pulmonary edema which may develop in serious cases of poisoning even after 12 hours. At first sign of pulmonary edema, the patient should be placed in an oxygen tent and treated symptomatically.

In case of poisoning, it is also requested that Bayer, Inc. be notified: (816) 242-2504.
